

Uniflow® Connect Filtered Watercooler

The Uniflow® Connect Filtered Watercooler is a compact and versatile watercooler suited to lunchrooms, staff areas and waiting areas.

Plumbed into the mains water supply, this system ensures freshly filtered drinking water for staff and clients in almost any area with a water supply. With no drainage required, installation is simple.

Equipped with state-of-the-art carbon block filtration as standard, freshly filtered water is stored in a sealed stainless steel tank, ensuring the water is kept free from contaminants.

With twin dispensing taps, the Uniflow® Connect can be supplied in Cool & Cold or Hot & Cold configuration, making this a valuable asset to every area.

Carbon-Free filtration is available on request. Upgrade the filtration module to an advanced microfiltration system to ensure waterborne bacteria is eliminated.

Features & Benefits
